

Hi we're talking today in this episode of The Guy R Cook Report about using a free speed test to measure how fast your webhost is serving your content maybe you're shopping for a web host for a new online project this might be that pearl in the oyster as I say oftentimes they'll help you and determine if you're getting a

good host there's a lot of free hosts a lot of pay-to-play hosts and we're gonna look at a couple.

The online speed test tool that I use is GT metrix and here are the steps that I use to measure the performance of a web host and maybe a little extra first in order to find out the IP address of your hosts you're going to go to HTTPS colon forward slash forward slant I oftentimes say whack Doc's dot NEXESS dot net forward slant article forward slant how-to -find - the - IP - address - of - a - website - or - server dot HTML thank God for show notes if you go to The Guy R Cook Report dot Podbean dot com you can get that link and then you won't have to try to scribble it down as I say it so fast so you go to that site and it's gonna look like this there's the nexess window the Global DNS checker and what you do and I've already done this for google.com and the name we're all familiar with check DNS service around the world and do a lookup and I took the address that is assigned to Mountain View California where headquarters is of 172.217.5 .14

Okay then i did a test and to really measure the test I compared it against the test i ran off with my hosting and it beats google according the GT metrics were just a touch faster a little bit of edge by using SiteGround over hosting at Google according to this test so I'm not saying I've thrown down the gauntlet oh I'm faster than they are but according to this test I am

So once you have an idea of how fast the server can deliver your content then make sure that your content is well crafted package they'll take advantage of that good speed cuz you can have a really cat fast server and have bad content and make it go south it's not gonna be up to your expectations and that's what

we're all about speak of expectations the patrons expect to get this kind of content we thank you for your support and return for that effort helping us meet our goals and obligations if you liked this check out the other episodes of The Guy R Cook Report and take a look at the credits when you get to the show notes that you've gotten to by going to The Guy R Cook Report dot Podbean.com and this concludes this episode.

It's a wrap
